Companion Animal

Abstract Submission

Companion Animal

BSAS Conference 2022

The BSAS 2022 conference will see the launch of the Society's first ever dedicated Companion Animal Symposium, giving those within the sector the unrivalled opportunity to raise their profile and gain exposure for their research, amongst the animal science and technology community.

Presenting your poster or research at the BSAS 2022 conference, provides a fantastic opportunity for authors to actively engage with others during the conference.

The virtual aspect of the conference also presents new opportunities for those submitting abstracts, offering additional flexibility, creativity, and innovation in a digital space.

The Symposium's speaker panel will look at the current state of research and practice, discussing the role of animals in human and planetary health, focussing on evidence-based research from academics and practitioners on the following topics:

- Human mental health related to companion animals and animal interactions
 - Human-companion animal interactions
 - Animal-assisted interventions
- Well-being in a home or managed environment
 - Pet physical, emotional, behavioural and social needs
 - Evidence-based solutions to improve companion animal welfare and human interactions

View our website

Most often companion animals are dogs and cats, but horses, birds, rabbits, goats, gerbils, snakes, rats, mice, fish, amphibians and other species also share our homes and our lives.

Once submitted, abstracts will be reviewed by the BSAS panel of experts. Submissions can be edited at any time up until midnight on the 31st of October 2021. All submissions will then be automatically submitted at the deadline and any incomplete submissions will be rejected.
