VIRTUAL  
CONFERENCE

# The Challenge of Change The New Normal?

## You can expect:

### Animal Science

International speakers share their insights on research developments and practical solutions to underpin sustainable animal production, while also exploring how we can unify approaches to improve performance and wellbeing of animals

> **FULL PROGRAMME**

### Developing Talent

Dedicated early career programme providing an international platform to showcase the exciting work of our emerging scientists, as they take up their role in the world of animal science.

> **FIND OUT MORE**

### An Immersive Experience

The conference is entirely digital, and promises an immersive experience for all delegates, providing networking opportunities, break-out discussion and both formal and informal introductions to key influencers, speakers and topics.

> **FULL PROGRAMME**

### Industry Topics

Addressing key themes including sustainability, international trade, virtual knowledge transfer/education, precision agriculture and the most effective way to operate on a global platform – as one world.

> **FIND OUT MORE**

## BSAS Virtual Conference 12-15 APRIL 2021

Uniting animal scientists from across the globe online.

Join the debate. Your animal science conference. Your way.

# Join the debate. Your animal science conference. Your way.

## Continuous Professional Development

Through attending the conference, you'll receive 150 CPD points. This approval signifies that the highly engaging programme that delegates will get to experience at the conference, has been recognised as a merit to their developmental needs.

## The Future of Farming

We are excited to announce that Countryfile and Costing the Earth Presenter Tom Heap will be appearing at the BSAS 2021 virtual conference, as part of the Developing Talent sessions. Tom will be sharing his wisdom and answering your questions, on the future of farming, given the current uncertainties, and what our early career scientists can do to make the biggest impact on these issues as their careers develop.

Developing Talent Sessions are supported by AHDB

## Sustainability in the Agri-food Supply Chain

CIEL, the UK's livestock innovation Centre, hosts this industry-led session highlighting the challenges around sustainable production for the livestock sector, together with considering the approaches and innovations that could monitor progress, offer solutions and engage with consumers

## Science into Practice

This session will focus on real life examples of putting innovation into practice, and how organisations are dealing with this in the current climate, and how they've adapted in the past year.

Keynote Session Supported by KTN

## Hammond Lecture

Alison L. Van Eenennaam

'Animal Scientists and Cell-Cultured Meats: Learning from past Science Communication Failures' focuses on cell-cultured meats, what they are, what is known about their anticipatory life cycle assessments (LCA), and more importantly how animal scientists should use their expertise and knowledge of science to constructively engage with proponents of cell-cultured meats.

## Global Approach to Net Zero

During the session, Dr Elizabeth Magowan who leads programmes of research on Holistic sustainable livestock system at the Agri-Food Biosciences Institute (AFBI), will overview the key findings from the 'Net Zero Carbon & Livestock' report, emphasising the need for urgent action and the roles of all parties in the wider supply chain and policymakers to inform debate and generate the actions, that will be required if the UK livestock industry is to achieve its net zero carbon goal within the next 30 years.
